

# 9 most unusual school subjects

Physics, chemistry, algebra and other subjects, and large homework — life realities of students. Not difficult to imagine a typical homework assignment for today: read a paragraph, learn a bunch of historical facts about the Ming dynasty, solve the following formula, which can hardly be applied in real life. What would have changed school if homework assignments included implementation of the 230; personal dreams! Let's learn how to prepare students for adult life in different schools of the world collection of the most interesting school subjects.

## Lesson 1. Cybersecurity in the schools of Israel

Israeli teachers understand that it's important for students to obtain skills effective use of Internet resources! Therefore, in this country on a special lesson to teach how to navigate in the world wide web, how to communicate in social networks and adequately respond to various comments.

In addition, at these sessions the teachers introduce children to the risk of gambling. It all takes place in the framework of the special discipline of cybersecurity. Agree, such a lesson would be informative for our students! But also useful!

## Lesson 2. Call to the Board in Hawaiian. Surf lessons

Imagine our students who would come to class with a surfboard! I think the kids would go to school with great enthusiasm! Schedule educational institutions in Australia and Hawaii this is a typical lesson at school.

## Lesson 3. Easy German happiness

Homework on the lessons of happiness is one of the effective methods of education of the harmonious personality. The kind of discipline provided by the schools of the city of Heidelberg in Germany.

Agree, every student would perform with enthusiasm homework, the meaning of which is to create something new based on his own idea. It all depends on the personal preferences of the student: to create a toy, to film, to come up with a game — anything!

## Lesson 4. These scientific discoveries within the normal homework

Often our students don't even know where, except for successful completion of examinations, can in life to use a pile of theoretical knowledge obtained at school. A program of the United States this is a special subject — "scientific discoveries".

As part of homework, the implementation of which is given yearly, every student creates their own invention based on previously obtained theoretical knowledge. During the presentation of their work students together to discuss the relevance of the invention and the success of its implementation project author.

## Lesson 5. The exam for the "admiration of nature"

Most scientific achievements in the field of robotics belongs to the Japanese. But this does not mean that all the attention at school is given only mathematics, computer science or physics. So, in the school curriculum of Japan provided the training course "love of nature". And it's very difficult walking, as it might seem at first glance! In these lessons children learn to be attentive, patient and observant. The main task of this discipline is to learn to notice and appreciate the aesthetic component of the surrounding world. The success of the student is evaluated by teachers as relevant current and even test scores!

## Lesson 6. Of financial fraud since the first grade

The rate of financial literacy, which is present as an elective in many modern schools, provides the students skills for effective money management. During the lessons the students simply and clearly explain such complicated things as lending and its conditions, the profitability of investments, the usefulness of securities, which are financial fraud and how to avoid them.

The knowledge gained in these lessons will be useful in adult life!

## Lesson 7. "You — Mat"

In the Republic of Kalmykia was a mandatory school subject "chess". According to experts, children who play chess, more focused, restrained, and have better developed logical thinking and memory in comparison with their peers. This is confirmed by the results of the exam.

## Lesson 8. About "it" from 8 years

In public schools in the post-Soviet space the word "sex" — mostly taboo. But Norwegian teachers in the framework of the national education taught [find this](#) by separate subject on sex. This lesson is taught to students from 8 years.

Unfortunately, our society is still not accepted to discuss the scope of privacy in school, not all parents can talk about this with children at home. So our students mostly learn about it on the Internet with consequences.

## Lesson 9. Instead gadgets the Lotus position

Within the school program Vietnamese students in Ho Chi Minh city every day to attend yoga classes. Mandatory lesson lasts an hour, but you will

have the opportunity to visit yoga and even optional. This discipline is in demand. So, parents report that yoga can reduce children's dependence on gadgets, and experts ascertain decrease stress levels and increase General performance in training.

Also, in an effort to maintain national traditions in Bhutan for private lessons learn to shoot a bow, in Bashkortostan to mess around in the apiary with the bees, and in Texas and Australia, there are whole farm schools. So, the main task of the academic subjects in any school in the world, primarily to adapt a little person to adulthood.

Which of these lessons would you like to see in your school?
